

Manuscripts Wanted for New Feature in *Pediatrics*:

The editorial board of *Pediatrics* would like to make you aware of a new feature that will debut in *Pediatrics* in January. It is tentatively being called Diagnostic Dilemmas and Clinical Reasoning and will use the presentation of enigmatic clinical cases that require the input of both generalists and specialists, who will comment on their thought processes as the case is presented in segments. The goal is to publish the robust discussion of those asked to comment on the case regarding the clinical reasoning needed to make a correct diagnosis. If you have a case conference in your institution and wish to have those who present the case write it up as the discussion ensued, that would be ideal.

We are beginning to solicit potential cases for this new feature, and will begin to accept manuscripts this summer. We would appreciate it if you could distribute this announcement to faculty and residents who may be interested in submitting a manuscript.

We have attached the draft author instructions for this new feature to this email. All manuscripts will undergo a peer review process. Questions should be directed to Rachel Moon, MD, Professor of Pediatrics at George Washington University (Children's National Medical Center), who will be the section editor for Diagnostic Dilemmas and Clinical Reasoning, at rmoon@cnmc.org.

Thank you for your attention to this.

Sincerely,

The Editorial Board of *Pediatrics*
